Title:

Digital path in the lab: Pros & Cons

From the project to innovative materials

Synergy and global vision for fast and effective solutions

Abs:

The clinic-lab synergy has always been based on info exchange and today new technologies make such teamwork more and more effective and fast.

In the project phase, just like a true smile architect, the technician can support the treatment plan development and lead the clinician in the prep phase through a series of digitally manufactured devices, color assessment and carefully oriented material selection. In so doing, the fork-flow will be faster and more efficient also when solving complex cases and dealing with crucial project phases.
