Biography:

Dr. Emanuele Cicero is a Former Assistant Professor in the Department of Prosthodontics at Tufts University School of Dental Medicine.

He is a specialist in Prosthodontics and completed his three year Post-doctoral advanced education training in Prosthodontics at Tufts University School of Dental Medicine (TUSDM). Upon completion of his specialty training, in recognition of his academic accomplishments, he had the honor of being selected as a full-time faculty member and appointed Assistant Professor at Tufts University where he contributed to evolving comprehensive dental education that integrates science, technology, patient needs, and lifelong learning in a world-class environment. He is an Associate Editor of the Journal of Clinical and Experimental Dentistry.

Dr. Emanuele Cicero lectures nationally and internationally.

A internationally respected clinician and lecturer, Dr. Emanuele Cicero's main focus within teaching, research and clinical practice is complete mouth rehabilitation in fixed prosthodontics and dentofacial esthetics as well as the implementation of digital technologies in both reconstructive and multidisciplinary dentistry.

He has practiced his profession in Italy, Spain, Brazil, and in the U.S.A.

Dr. Emanuele Cicero limits his practice to Prosthodontics in his multispecialty practices 'Clinicacicero' in Italy and London.

Dr. Emanuele Cicero is an active member of The American College of Prosthodontics as well as other international professional organizations.

Presentation Title:

Complete Mouth Rehabilitation in Fixed Prosthodontics: An Individualized Approach

Presentation Abstract:

The goal of complete mouth rehabilitation is the long-term restoration and/or enhancement of a functional and esthetic dentition. Along with the complexity of such treatment, the selection among a variety of available materials and techniques can make the procedure even more challenging. This complexity increases when restoring patients with different facial types and dento-skeletal classifications. As prosthodontists and restorative dentists, it is of crucial importance to understand and classify patients to better define the objectives and limitations of treatment. To achieve a stable functional and esthetic result, it is important to do a correct diagnosis following some standard parameters.

This presentation will outline an individualized approach to prosthetically restore or enhance dento-facial harmony through fixed complete mouth rehabilitation. The most relevant criteria for diagnosis, treatment planning, VDO decision, and treatment sequencing will be discussed, along with key functional and esthetic guidelines. Guidelines to recognize different facial types and the implementation of important orthodontic principles for a correct prosthetic rehabilitation will be presented.
